

Konferens om bostäder, parkeringstal och mobilitetstjänster

Program for thematic workshop C: How to evaluate and learn from the urban development and housing construction projects in focus of the conference? Evaluations of mobility services, access and use of parking, and travel patterns

Host: KTH. The WS start with a panel conversation and continues with discussion between all participants.

Time: Tuesday 12 September am 9:00-12:00

Location: KTH Royal Institute of Technology, Teknikringen 10B, Stockholm. Room: "Acorn", 4th floor. GoogleMaps: <http://korturl.com/Teknikringen10b>

In this workshop we will discuss how to evaluate and learn from the urban development and housing construction projects in focus of the conference. Particular attention is paid to evaluations of mobility services, access and use of parking, and travel patterns.

The workshop takes place in the form of a conversation that Fredrik Johansson, KTH, will facilitate. Specially invited guests begin by raising important questions about scientific evaluations of urban development projects that are in the focus of the conference. After that, all participants in the workshop will participate in the facilitated conversation.

Examples of questions raised are:

- What methods are appropriate for detecting changes in travel habits? What are the main advantages/disadvantages with these methods?
- What are the main challenges of these evaluations and how should these challenges be addressed?
- What recommendations do you have for future evaluations?

Specially invited participants:

Robert Pressl, FGM-AMOR Austrian Mobility Research.

Stefan Melzer (MA), MO.Point Mobility services, Managing Director.

Malin Henriksson (PhD), Swedish National Road and Transport Research Institute.

Greger Henriksson, Associate Professor (*docent*) in Environmental Sociology and Ethnology, KTH, travel habit researcher.
